

## **Advanced Light Microscopy and Nanoscopy (ALMN) Online Platform, Workflow Documentation, and Antibody Library**

High-resolution fluorescence imaging and collaborations between partner sites on these complex activities is supported through a user-centered custom-programmed ALMN Online Platform providing actionable support, documentation, data sharing, analysis, reuse, and training opportunities for all CURE-PLaN scientists and is globally accessible 24 hours most days.

The online generation, optimization, documentation and application of imaging workflows, analysis, and training is available to all investigators. In addition, customized ALMN instrumentation, unique antibody and fluorophor staining materials, protocols, and an antibody library are available online.
